ImArjunJ

Summary

Software engineer specializing in low-level, high-performance native applications and backend systems. Over 8 years of self-directed education in C++, Rust, and C#/.NET along with a pre-print research paper. Expertise spanning kernel development, LLVM, reverse engineering, and embedded systems, demonstrated through a technical blog and personal electronics lab. I've consistently won multiple hackathons with low level engineering, including Junction 2025, one of the biggest hackathons in Europe.

Experience

XTX Markets *Information Security Engineer* **London, UK** *July 2026 – Sep 2026*

- Incoming Summer 2026

Hacktron AI *Software Engineer* **London, UK** *Sep 2025 – Jan 2026*

- Worked on AI agentic graph algorithm to auto-generate callstacks via treesitter for AI pentesting reports
- Created authentication flow for CLI

BP *Software Engineer Intern* **London, UK** *Jul 2023 – Sep 2023*

- Contract extended by 2+ months for exceptional performance and stakeholder feedback
- Achieved 99%+ user satisfaction on Safety & Assurance Power Apps panel development for 500+ assurers
- Innovated Power BI reports using DAX statistical regression calculations; reports viewed by over 50 executives now contain my contributions

Projects & Publications

jcan
open-source can bus diagnostic tool featuring the first-ever linux driver for vector can hardware, signal plotting, real-time bus monitor, dbc decoding, signal visualization, and multi-adapter support. c++23, dear imgui, libusb. Project

LogiLinux
Winner of LauzHack '25. We engineered full Linux support for the Logitech MX Creative Console by comprehensively reverse-engineering the proprietary HID++ communication protocols. The system features a high-performance C++ driver backend capable of functioning as a standalone library, coupled with a polished Tauri-based UI. To ensure extensibility, we architected a complete ecosystem including a custom SDK, and plugin registry to replicate the fidelity of official drivers. Project

Wavelet
Winner of Junction '25. We visualize EM waves via the Maxwell equations which describe radiation propogation in a specified grid, giving time-based mathematical wave-forms. This was done in Pure C++ / OpenGL with no other dependencies. To be optimized for GPU rendering, We heavily utilized compute shaders, parallelism, culling, and graphics programming principles. Project

Chimera: .NET Runtime Process Injection
Created stealth injection framework bypassing EDR/AV systems. Reverse-engineered CLR internals to execute payloads in JIT memory regions. Documented methodology in detailed technical writeup with 5,000+ views across multiple platforms Writeup

RX-INT: Kernel-Assisted Security Tool
High-performance Windows kernel driver for real-time threat detection recognizing advanced threats (VAD manipulation, module stomping) Outperformed industry tool PE-sieve in 100% of edge-cases through efficient caching algorithms and novel methodology Research Paper

Hyprlenia
Won 3rd Place + Best Technical Project (ICHack '26). hyper-optimised sandbox for real-time 3D emergent behaviour. generate simulations convergent towards low-energy / physics principles or biological cell evolution based on customizable growth parameters. Project

Competitions & Certifications

- **Meta Hacker Cup (Top 6.5%)**: Placed 1465 / 22,494 in Round 1 of the global coding competition (Oct 2024) Certificate
- **Hackathon Winner**: LauzHack '25 [Nov 2025], Junction '25 [Nov 2025], SotonHack '25 [Mar 2025], JumpStart [Sep 2024], RoboHack '25 [Mar 2025] (2nd),ICHack '26 [Jan 2026] (3rd), ICHack '25 [Jan 2025] (4th)

Education

University of Southampton *BSc Computer Science* **Southampton, UK** *Sep 2024 – Jul 2027*
Year 1 Grade: First Class

Feltham College *A-Levels: Mathematics, Physics, Chemistry* **London, UK** *Sep 2022 – Jul 2024*
Grades: A*AA

Reach Academy Feltham *GCSEs* **London, UK** *Sep 2017 – Jul 2022*
Grades: 999 in Physics, Chemistry, and Mathematics

Technical Skills

Languages: C++, Rust, C#, Python, TypeScript, SQL, PHP, LLVM IR

Technologies: .NET Framework, React, Node.js, Win32 API, Windows Kernel, FPGA, Linux, Git, Security, System Verilog

Developer Tools: Visual Studio, VS Code, IDA Pro, Ghidra, x64dbg, Wireshark, Google Test

Data & DevOps: GCP, Docker, AWS, Power BI, Power Apps, DAX, Selenium, CI/CD
